

SOCIALRES

Together we make energy

SocialRES is a research and innovation project, funded by the EU, that will develop new inclusive strategies for the **clean energy system of the future**.

It aims at fostering **energy democracy** through social innovation and the active collaboration between energy aggregators, cooperatives and crowdfunding platforms.

OBJECTIVES

SocialRES aims at closing non-technological research gaps that impede the widespread uptake of social innovation business and service models in the European energy sector. Its key Scientific Objectives (SOs) are:

1. identification of organisational practices of social innovation schemes;
2. implementation of mutual learning and co-creation activities to assess the collaborative potential of social innovations;
3. decision-making support and citizens empowerment.

IMPACTS

SocialRES will encourage the uptake of social innovation and the empowerment of consumers as responsible actors in the clean energy transition. By unleashing the potential of social innovation, the project will further the goals of the Energy Union ensuring a more secure, sustainable, competitive and affordable energy system for European citizens.

Fostering socially innovative and inclusive strategies
for empowering citizens in the renewable energy market of the future

BE PART OF THE ENERGY REVOLUTION
